The Kansas legislature is already in massive revolt against their 'Crat governor. Is Kansas regaining its sanity after electing her?

I smell ('C)rats:

Giuliani: FBI Refused Hunter Biden's Hard Drives During 'Illegal, Unconstitutional' Raid

If you had any doubts about corruption of the *FBI at the top, they applied for a secret warrant for Giuliani's iCloud account the day he became Trump's attorney*. That iCloud account would contain all information from his Mac and iPad and iPhone devices.

If you have any Apple equipment, do what I did - turn off your iCloud connection, delete your iCloud account (if you ever set one up), and buy a local hard drive for backup using Apple's Time Machine. Keep your data local and private. You can buy a good backup drive for less than $100.

Here is what the 'Crat's secret deep state police (the FBI) did:

The'Crats are so desperate for illegal alien voters that they have ordered an end to deportations, even of murderers - yes, really!

Biden's DHS Plans No Deportations for Illegal Murderers, Sex Offenders

Hence, deportations of illegal aliens are now at the lowest level in history - that is how desperate the 'Crats are. But Black and Hispanic American citizens are wising up to the fact that these aliens are competing for their jobs and holding down their wages; hopefully the Stupid Party will make publicizing this a major campaign goal on 2022 and 2024.

Biden Forces Down Deportations of Illegal Aliens to Lowest in U.S. History

The 'Crats' coalition is shedding corn farmers (and those whom they support) whose subsidy pie will be killed by 'Crats' electric vehicle mandate. 40% of all American corn is used for mandated fuel ethanol. This is a HUGE deal, amounting to about $12,000 per year averaged over every Iowa family, with lots also going to other corn growing states. The continuation of income from this subsidy is literally essential for many corn farmers who have mortgages on their farms that they could not pay off if demand for corn ethanol fuel drops.

For example, GM has announced that they will cease producing internal combustion engine cars after 2035. This is an existential threat to corn farmers, and the 'Crats cannot afford to lose their votes, Moreover, it isn't just the corn farmers - it is everyone who they support, and that is a lot of people in the corn belt. The 'Crats have apparently overlooked this very serious political problem:
